# CITY OF BRANTFORD THREE GRAND RIVER CROSSINGS MUNICIPAL CLASS EA

# Project Overview and Background

comm I TH & B Railway River Crossing

The City of Brantford is conducting a **Municipal Class Environmental Assessment (MCEA) to review** alternatives for three bridges over the Grand River, including the Lorne Bridge, **Brant's Crossing Bridge and the TH&B Crossing Bridge.** 

The purpose of this Virtual Public Information Centre (PIC) is to review design alternatives for the recommended solution that was presented in PIC #2 and offer an opportunity for interested parties to review and provide comments to the **Project Team.** 

# **Project Overview and Background**

### **Points of Contact**

- Notice of Study Commencement  $\checkmark$
- Public Information Centre #1  $\checkmark$ 2)
- Public Information Centre #2 3)
- Notice of Class EA Schedule Change  $\checkmark$ 4)
  - Public Information Centre #3 5)
  - Notice of Study Completion 6)

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

# March 5, 2020 May-July, 2020 April 2021 October 7, 2021 October 2021 Winter 2021/2022

# **Recap of Public Information Centre #2**

### **Evaluation Process**

### **Presented** at PIC 1

Long List of **Alternatives for Each** Crossing

Develop alternatives for each crossing.

Screening

Review each alternative against screening criteria.

Alternatives must be technically and economically viable, and meet the needs of the Problem / Opportunity Statement

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

#### **Detailed Evaluation**

Evaluate Crossing Strategies using detailed evaluation criteria.

#### **Identify Recommended Crossing Strategy**

# **Recap of Public Information Centre #2**

Replace

#### Legend

**Shortlisted Alternative** identified as **Recommended Solution** 

Shortlisted Alternative

Longlist Alternative did NOT proceed to Shortlist

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

### New Pedestrian & Cyclist Crossing

**Do Not** Construct

## **Recommendations from PIC #2**

### LORNE BRIDGE

#### **Recommended Solution:** Rehabilitation

- Rehabilitate to maintain function as a vehicular crossing with sidewalks on each side.
- Rehabilitation would include concrete repairs through the structure, with the outward appearance of the structure remaining the same.
- Removal of 30 tonne winter load limit.

### **BRANT'S CROSSING BRIDGE**

#### **Recommended Solution: Replace and Raise**

- Existing steel superstructure replaced with a new superstructure to convey pedestrian and cyclist traffic over the Grand River.
- Modifications to existing abutments and piers to raise the new bridge to reduce the risk of damage from flooding events.

### **TH&B CROSSING BRIDGE**

#### **Recommended Solution:** Minor Rehab and Eventual Removal

Minor rehabilitation to maintain the structure for approximately 10 to 15 years with the intent of eventually removing the steel superstructure.

Minor rehabilitation would include replacing the existing deck and other minor repairs. Existing foundations would remain in place following the removal of the superstructure.

## **Recommendations from PIC #2**

**Brant's Crossing Bridge: Replace & Raise** 

Initial Capital Cost: \$3.7M Lifecycle Cost: \$5.5M

#### Lorne Bridge: Rehabilitate

Initial Capital Cost: \$8.3M Lifecycle Cost: \$33M

Note: All costs in 2020 dollars.

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

#### **TH&B Crossing Bridge: Rehabilitate and Remove** at End of Useful Life

Initial Capital Cost: \$0.3M Lifecycle Cost: \$1.0M

**Total Cost of Recommended Solution** 

Initial Capital Cost: \$12M Lifecycle Cost: \$40M

# Next Steps in MCEA Process

# **Municipal Class EA Planning and Design Process**

### PHASE 1

### PHASE 2

PROBLEM OR OPPORTUNITY

- Data collection & background review

# **Alternative Design Concepts**

## The following alternative design concepts will be considered for each crossing:

### Lorne Bridge Keep or Modify Existing Cross Section

### **Brant's Crossing Bridge**

Style of New Truss > Width of Pathway over the Bridge Material of Bridge Deck Incorporation of a Lookout Incorporation of Lighting

### **TH&B Crossing Bridge** Material of Bridge Deck Raising of Bridge Deck

# Lorne Bridge

## **Existing Cross Section:**

- Each existing sidewalk is approximately 2.0m wide and each existing vehicular lane is approximately 3.5m wide.
- Public feedback indicated the existing sidewalks were too narrow for simultaneous cycling and pedestrian use.

# Lorne Bridge

## **Evaluation of Keeping or Modifying Existing Cross Section:**

### Wider Sidewalks:

- wider sidewalk.

### Cycling Lanes:

- vehicular facilities.
- introducing conflict points with motor vehicle and cyclist traffic.
- accessibility for cyclist traffic in the general area.

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

 $\geq$  Existing vehicular lane widths (3.5m) are the minimum width recommended by the City's Transportation Master Plan for an arterial road and cannot be narrowed for a wider sidewalk.

 $\succ$  The bridge deck was widened in the 1980's and cannot be widened further to accommodate a

> The existing traffic volumes crossing the Lorne Bridge signify the need for <u>separated</u> cycling and

Eliminating a vehicular lane for a cyclist lane is not recommended due to the traffic volumes.

> The adjacent Brant's Crossing Bridge provides strong connectivity across the Grand River, without

The replacement of the Brant's Crossing Bridge provides the opportunity to improve the

## Lorne Bridge

# Recommendation: Maintain existing sidewalks and vehicular lane widths following rehabilitation.

## **Style of New Truss:**

shown on the next slides.

Girder Span

**Brant's Crossing Bridge** 

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

> To mitigate the negative impact of removing the heritage superstructure, the existing through truss spans at Brant's Crossing should be replaced with new prefabricated through trusses. The new trusses will be more slender than the existing trusses but will have a similar overall appearance to the existing through truss spans. > The girder spans will also be replaced with either a "Through Truss" or a "Pony Truss" as

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

Gordon Glaves Crossing Bridge (Brantford)

### Pony Trusses

Homer Watson Blvd. Bridge (Waterloo)

No connecting members overhead

## **Option 1: Through Truss for All Spans**

## **Option 2: Pony Truss Spans at Each End**

## **Recommendation: Option 2 (Pony Truss Spans at Each End)**

### **End Spans: Pony Trusses**

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

#### **Middle Spans: Through Trusses**

# Brant's Crossing – Pathway Width

## Width of Existing Pathway over Bridge:

> The existing pathway at Brant's Crossing Bridge is 2.4m wide. > Existing width is prohibitive to simultaneous pedestrian and cyclist use. > The new bridge can be designed to have a wider pathway along the bridge.

# Brant's Crossing – Pathway Width

## Width of Pathway over Bridge:

### D'Aubigny Creek Trail Crossing Pathway Width = 2.5m

#### A pathway width of <u>4 meters</u> is recommended for the new structure: Meets trail design guidelines Avoids increased costs and construction Preferred width for maintenance vehicles complexity for pathway >4m wide

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

Separated cycling and pedestrian lanes are not recommended.  $\geq$  Minimum width for a multi-use trail is 3.0m + a 0.5m buffer on either side = 4m width.  $\geq$  Refer to the widths of some other active transportation bridges in the City below:

### **Gordon Glaves Crossing Bridge** Pathway Width = 3.9m

### **TH&B Crossing Bridge** Pathway Width = 4.7m

# Brant's Crossing – Bridge Deck Material

## Material of New Bridge Deck:

### $\geq$ The following materials in the table below have been evaluated as part of this MCEA:

### **Wood Deck Boards**

Capital (	Cost
-----------	------

**Service Life** 

Riding Surface

Ease of Winter

Maintenance

Maintenance Requirements

\$\$\$\$\$ (Approximately \$150,000)

#### 10-15 years

#### Slightly uneven

Issues with snowplow blades hitting joints between deck boards.

Routine maintenance to replace deck boards as needed.

![](_page_23_Picture_2.jpeg)

![](_page_23_Picture_6.jpeg)

# Brant's Crossing – Lookout

## **Recommendation:**

### It is recommended to incorporate a lookout into the new superstructure.

![](_page_24_Picture_3.jpeg)

![](_page_24_Picture_4.jpeg)

![](_page_24_Picture_7.jpeg)

Improves marketability as a tourism destination crossing the bridge

### Provides enhanced views to the surrounding natural environment and the Lorne Bridge Provides an area to stop and rest as you are

![](_page_24_Picture_13.jpeg)

![](_page_24_Picture_14.jpeg)

# Brant's Crossing – Lighting

## **Incorporation of Lighting along Bridge:**

- Existing trails at each end of the bridge include street lighting.
- Existing bridge has lights mounted along the top of the truss.
- Functional bridge lighting, similar to the existing, should be included in the new bridge, at a minimum.
  - <u>Aesthetic/accent lighting could also</u> be incorporated into the new bridge, which could improve the marketability of the bridge as a tourism destination.
    - > The additional cost for incorporating aesthetic/accent lighting could range from \$150,000 to \$500,000

![](_page_25_Picture_7.jpeg)

![](_page_25_Picture_13.jpeg)

![](_page_25_Picture_15.jpeg)

# Brant's Crossing – Lighting

## **Recommendation:**

![](_page_26_Picture_2.jpeg)

![](_page_26_Picture_3.jpeg)

![](_page_26_Picture_4.jpeg)

![](_page_26_Picture_9.jpeg)

 Potential to improve marketability as a tourism destination Continues lighting from trails at each end Improves safety across bridge  $\checkmark$ at night

![](_page_26_Picture_12.jpeg)

# Brant's Crossing – Cost Estimate

### The Capital Cost Estimate of \$3.7 million presented in PIC #2 was based on:

- > 4m wide pathway
- Steel deck panels
- > No lookout
- > Functional lighting

#### As presented in this PIC, the preferred solution was refined to include the following design features: **Concrete Deck:** Lookout:

![](_page_27_Picture_7.jpeg)

### Based on the additional cost for these recommended features, the Recommended Design **Concept for Brant's Crossing is estimated to be approximately \$4.4 million.**

![](_page_27_Picture_10.jpeg)

![](_page_27_Picture_12.jpeg)

![](_page_27_Picture_13.jpeg)

![](_page_27_Picture_15.jpeg)

### Can the existing wood deck be replaced to improve the pathway across the bridge?

- $\succ$  The minor rehabilitation to the TH&B Crossing Bridge will include installing a new wood deck.
- To reduce the likelihood of the wood boards deteriorating, the new deck will be designed to minimize damage from maintenance equipment.
- > More expensive deck systems such as concrete or FRP are **not recommended** as the intent is to eventually remove the structure in 10-15 years.

![](_page_28_Picture_5.jpeg)

# TH&B Crossing – Bridge Deck Material

![](_page_28_Picture_11.jpeg)

![](_page_28_Picture_12.jpeg)

![](_page_28_Picture_13.jpeg)

### Can the existing deck be raised so it is easier to see over the sides of the bridge?

![](_page_29_Picture_2.jpeg)

![](_page_29_Picture_3.jpeg)

# TH&B Crossing – Raising of Bridge Deck

- protect cyclists.
- replacement.
- into raising the deck.

![](_page_29_Picture_11.jpeg)

> The existing deck is approximately 1.5m below the sides of the bridge.

> The sides of the bridge need to be a minimum of 1.37m above the deck to

Raising the deck by approximately 130mm (5") is possible but would be approximately double the cost of the standard

> As the intent is to eventually remove the structure in 10-15 years, it is **not recommended** to invest additional funds

# **Summary of Design Concept Recommendations**

![](_page_30_Picture_1.jpeg)

### Lorne Bridge: Keep or Modify Existing Cross Section Recommendation: Maintain existing sidewalks and lane widths

![](_page_30_Picture_3.jpeg)

![](_page_30_Picture_5.jpeg)

![](_page_30_Picture_7.jpeg)

# **Summary of Design Concept Recommendations**

### Brant's Crossing Bridge: Style of New Truss

Recommendation: Pony trusses at end spans and through trusses at middle spans
 Width of Pathway over the Bridge
 Recommendation: 4-meter-wide pathway
 Material of Bridge Deck
 Recommendation: Concrete deck
 Incorporation of a Lookout
 Recommendation: Incorporate lookout
 Incorporation of Lighting
 Recommendation: Functional lighting and consider accent/aesthetic lighting during detailed design stage

![](_page_31_Picture_3.jpeg)

![](_page_31_Picture_5.jpeg)

![](_page_31_Picture_6.jpeg)

# **Summary of Design Concept Recommendations**

![](_page_32_Picture_1.jpeg)

### **TH&B Crossing Bridge: Material of Bridge Deck**

Recommendation: Wood deck (designed to minimize damage from maintenance equipment) **Raising of Bridge Deck** 

Recommendation: Replace existing deck in the same configuration.

![](_page_32_Picture_5.jpeg)

![](_page_32_Picture_8.jpeg)

# Updated Cost Estimates

**Brant's Crossing Bridge: Replace & Raise** 

Initial Capital Cost: \$4.4M Lifecycle Cost: \$6.2M

#### Lorne Bridge: Rehabilitate

Initial Capital Cost: \$8.3M Lifecycle Cost: \$33M

Note: All costs in 2020 dollars.

![](_page_33_Picture_6.jpeg)

Three Grand River Crossings, Municipal Class Environmental Assessment – October 2021

![](_page_33_Picture_8.jpeg)

#### **TH&B Crossing Bridge: Rehabilitate and Remove** at End of Useful Life

Initial Capital Cost: \$0.3M Lifecycle Cost: \$1.0M

**Total Cost of Recommended Solution** 

Initial Capital Cost: \$13M Lifecycle Cost: \$40M
